EndNote 4

Fields:

Complete Reference 5

Citation

Citation, Abstract

Citation, Abstract, Subject Headings

Complete Reference

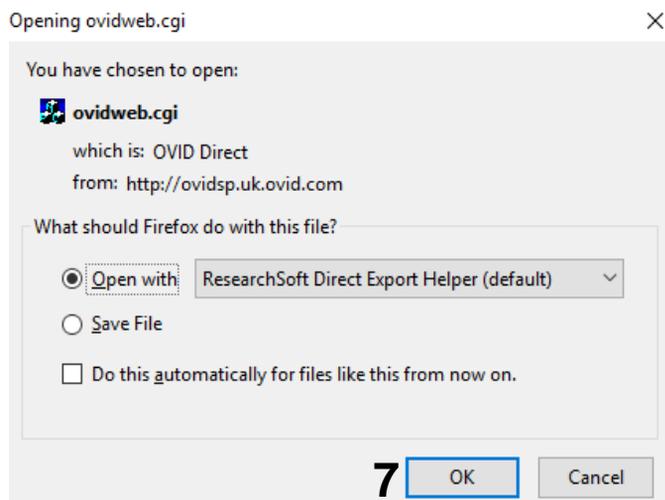

Custom

Choose «EndNote» (4) from the first dropdown menu and «Complete Reference» (5) from the second dropdown menu.

Finish with «Export Citation(s)» (6).

Cancel

Export 6

What happens next depends on your web browser. The references may be imported directly to EndNote, or the import file may be temporary saved. If the latter happens, get the file opened and the references will be imported to EndNote.

Example: Firefox. Click «**OK**» (**7**) to open and the import will happen.

EndNote will now only list the imported references. We recommend that you check a couple of references to see that the import was correct. In our experience, imports from Medline are usually correct.

Please note that references that are not articles (e.g. conference abstracts") may be imported with missing or misplaced data. This type of references should be checked after import and corrected manually if necessary.

Choose **"Show all references"** from the **"References"** menu

Import a temporary stored file:

Export Citation(s)

✕

Selected: 1-2

Total: 2

Format:

Reprint/Medlars 4

Fields:

Complete Reference 5

Include:

- Link to External Resolver
- URL
- Search History

Cancel Export 6

Choose «Reprint/Medlars» (4) from the first dropdown menu and «Complete Reference» (5) from the second dropdown menu.

Finish with «Export Citation(s)» (6).

Opening medlars.txt ✕

You have chosen to open:

 **medlars.txt**

which is: Text Document

from: http://ovidsp.uk.ovid.com

What should Firefox do with this file?

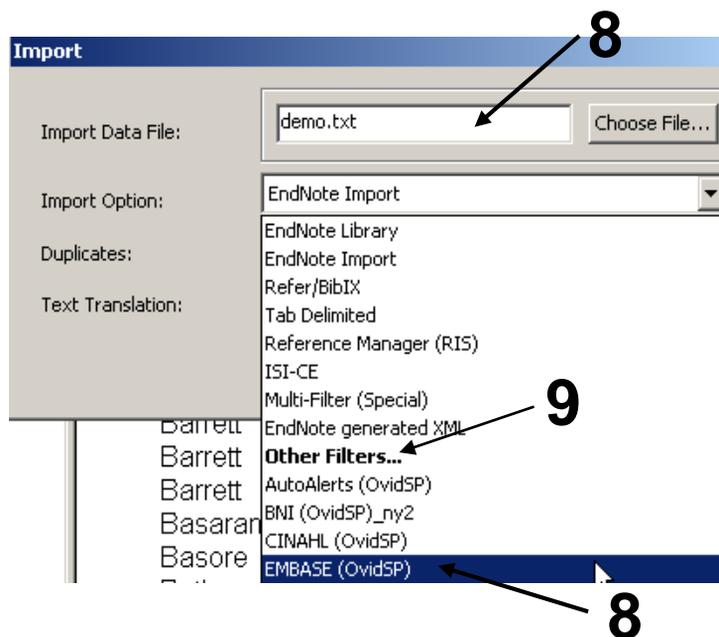

Open with Notisblokk (default)

7 Save File

Do this automatically for files like this from now on.

OK Cancel

Choose "Save File" (7) and save the file in a preferred location as a normal text file (.txt). NB! Different web browsers will have different interfaces for saving a file.

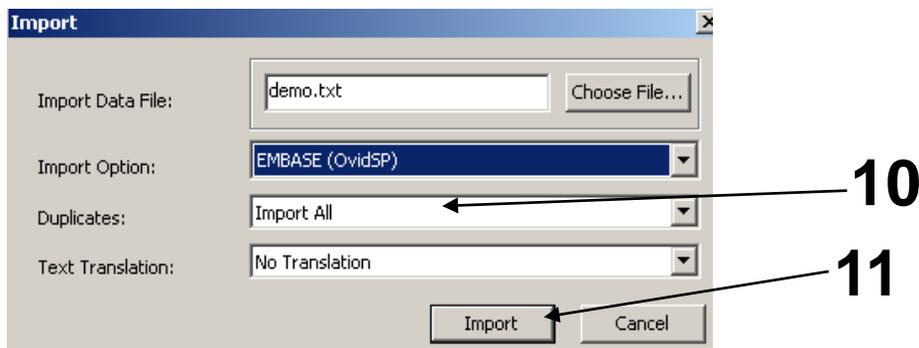

Open EndNote, and choose **"Import"** from the **"File"** menu.

Locate the import file **(8)**.

Choose import filter **EMBASE (OvidSP) (9)** from the list. Correct import filter is necessary for a successful import into EndNote.

The first time, **"Other filters" (10)** must be chosen to find the preferred import filter.

Finish with **"Choose"**.

Choose **"Import all"** from the **"Duplicate-menu" (10)** if you want to import all references in the import file without a duplicate check (you can find and discard duplicated later in your library). Choose **"Discard duplicates"** if you want duplicates removed from the import file prior to the import.

Choose **"Import" (11)** to get the references imported into EndNote.

EndNote will now only list the imported references. We recommend that you check a couple of references to see that the import was correct. In our experience, imports from Medline are usually correct.

Please note that references that are not articles (e.g. conference abstracts") may be imported with missing or misplaced data. This type of references should be checked after import and corrected manually if necessary.

Choose **"Show all references"** from the **"References" menu**
