7th Nordic Conference on Construction Economics and Organisation 2013

Green Urbanisation – Implications for Value Creation

12–14 June 2013
Trondheim
THE CONFERENCE

NTNU and SINTEF invites you to participate in this unique event; a conference about construction research and practice with a Nordic perspective. Our main goal is to present up-to-date research and reflections from practice, and to encourage a dialogue between researchers and practitioners in the construction industry.

Focus
The conference will focus on green urbanisation. Urbanisation is meant in a wide perspective. “Green” relates to the consequences for construction organisation and economy, from ongoing development, as well as the industry’s ambitions for the future. We encourage discussion of current trends in a multidiscipline perspective, including a social, environmental, economic, organisational and technological perspective.

Why should you participate?
The conference is targeted at practitioners, researchers, teachers and postgraduate students within all aspects of the built environment. The conference will have a special focus on construction economy and organisation with a Nordic perspective. Participants from non-Nordic countries and presentations on related topics are welcome, and are invited to challenge or contrast the Nordic dimension for deeper discussions.

Programme
The conference will include a combination of plenary sessions, parallel sessions and workshops. We invite speakers representing both research and practice to share their thoughts with us. The conference language is English, but practitioners have the option to present in a Scandinavian language.

TOPICS FOR MAIN SESSIONS

<table>
<thead>
<tr>
<th>The Sustainability Perspective:</th>
<th>Framework Conditions:</th>
<th>Challenges in Urbanisation:</th>
<th>Organisation for Execution:</th>
<th>Efficient Collaboration:</th>
