

BENCHMARKING EMR ADOPTION FOR HELSIT 2013

Introduction to EMRAM & status as of Q2/2013

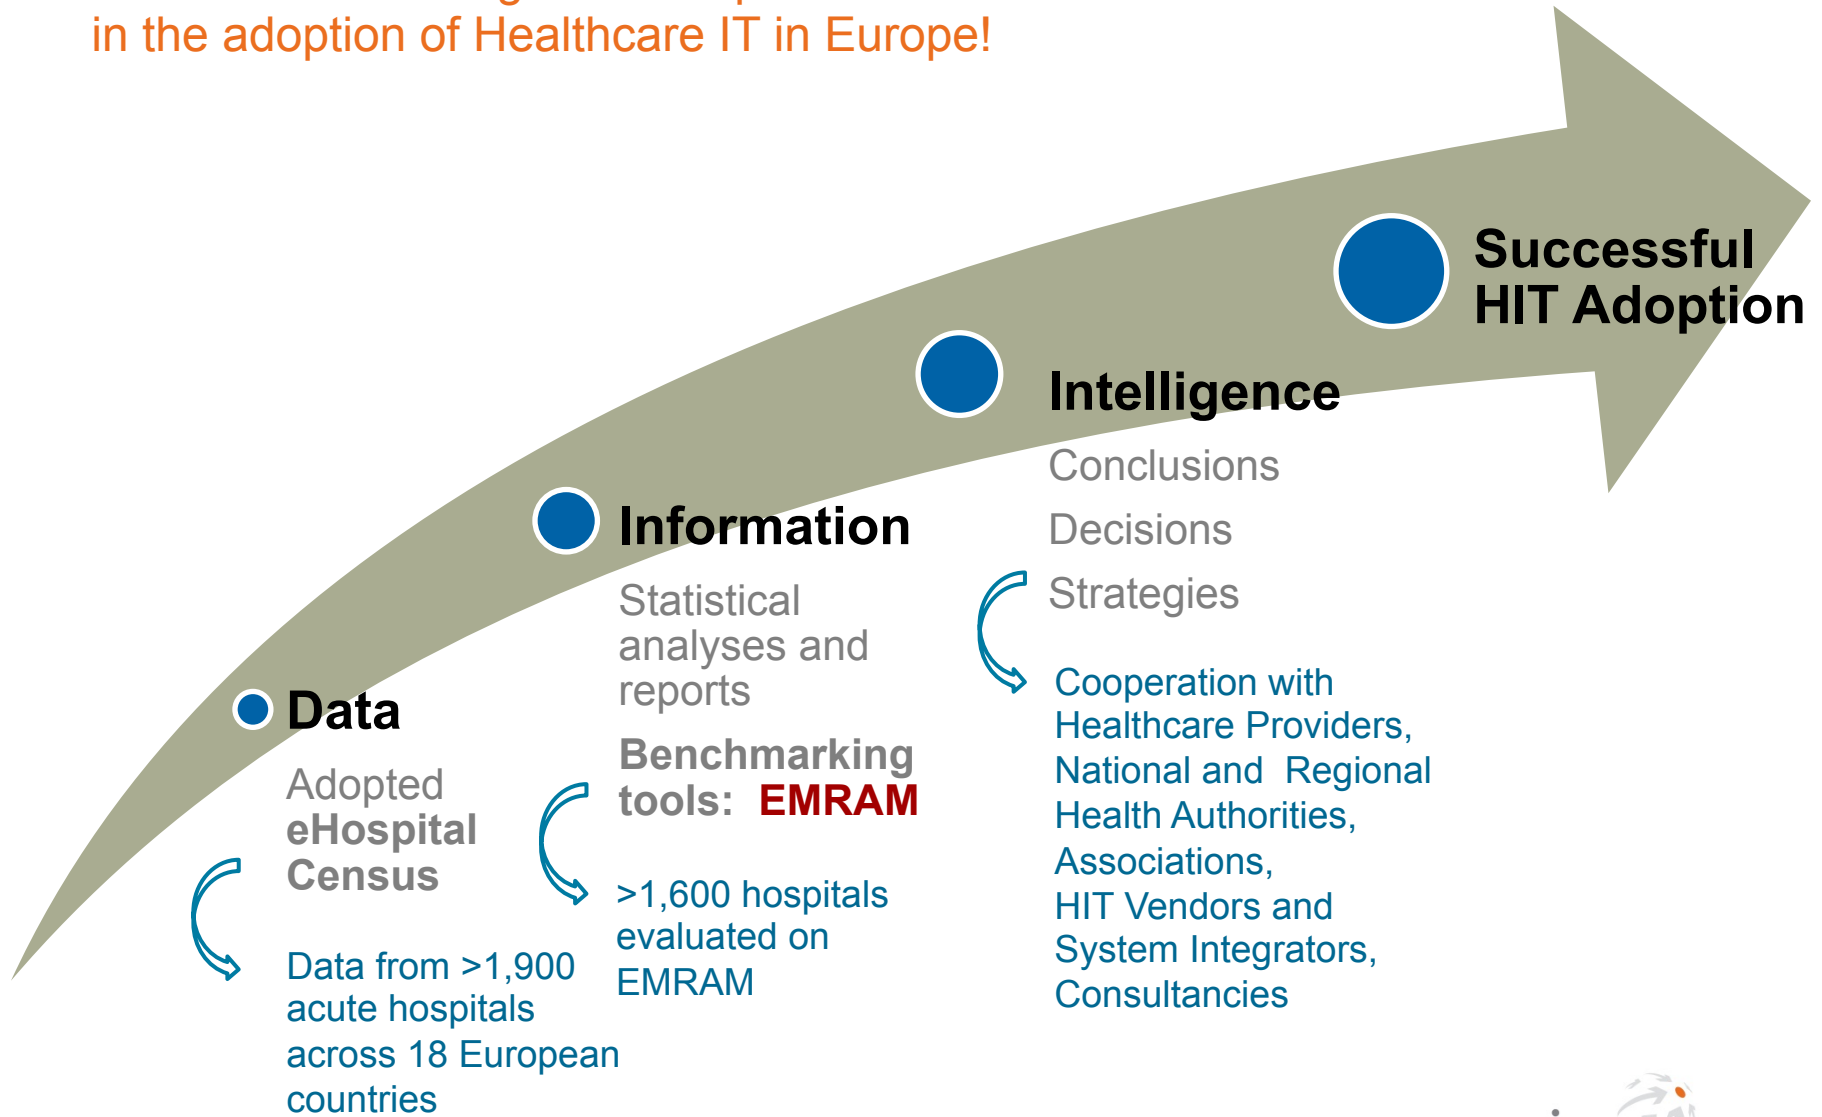

PRESENTED BY: DANIEL CZERMAK-WÄNN, NORDIC CLIENT RELATIONS MANAGER, HIMSS ANALYTICS EUROPE

SEPTEMBER 18TH 2013, TRONDHEIM

INTRODUCTION TO HIMSS ANALYTICS EUROPE (HAE)

HIMSS ANALYTICS EUROPE

... for benchmarking and best practice
in the adoption of Healthcare IT in Europe!

THE EMR ADOPTION MODEL

THE EUROPEAN EMR ADOPTION MODEL

... in 7 Stages to Highest Quality in Patient Care

European EMR Adoption Model SM	
Stage	Cumulative Capabilities
Stage 7	Complete EMR; CCD transactions to share data; Data warehousing feeding outcomes reports, quality assurance, and business intelligence; Data continuity with ED, ambulatory, OP.
Stage 6	Physician documentation interaction with full CDSS (structured templates related to clinical protocols trigger variance & compliance alerts) and Closed loop medication administration.
Stage 5	Full complement of PACS displaces all film-based images.
Stage 4	CPOE in at least one clinical service area and/or for medication (i.e. e-Prescribing); may have Clinical Decision Support based on clinical protocols.
Stage 3	Nursing/clinical documentation (flow sheets); may have Clinical Decision Support for error checking during order entry and/or PACS available outside Radiology.
Stage 2	Clinical Data Repository (CDR) / Electronic Patient Record ; may have Controlled Medical Vocabulary, Clinical Decision Support (CDS) for rudimentary conflict checking, Document Imaging and health information exchange (HIE) capability.
Stage 1	Ancillaries - Lab, Radiology, Pharmacy - All Installed OR processing LIS, RIS, PHIS data output online from external service providers.
Stage 0	All Three Ancillaries (LIS, RIS, PHIS) Not Installed OR Not processing Lab, Radiology, Pharmacy data output online from external service providers.

“Paperless” patient record environment
for **highest quality of care,**
data continuity & full HIE

Full electronic clinical decision support,
and highest medication safety

Completely electronic diagnostic
image management

Electronic order entry with decision
support and result reporting

Clinical ordering and documentation –
especially nursing care

A patient-centered electronic data
repository

Electronic diagnostic and pharmacy
department information

EMR ADOPTION MODEL

	Required capabilities	Health Information Exchange
7	Paperless medical record environment	Full internal data continuity and HIE (e.g. for disease m'ment programs)
6	Structured physician documentation for automated CDSS; CLMA	Sharing of clinical information via standardised electronic transactions
5	Completely electronic image management	PACS available to external clinicians remotely
4	Computerized physician order entry with 2nd level clinical decision support	e.g. ePrescribing with external pharmacy, exploding orders to ext. CPs
3	Clinical ordering and nursing documentation	e.g. medication reconciliation in eMAR, tele-monitoring
2	Patient-centered clinical data repository or electronic record	e.g. Remote access / HIE with care providers (e.g. medical summary)
1	Electronic diagnostic and pharmacy department information	Remote ordering, result reporting / data sharing (e.g. HL7); e.g. teleradiology
0	Mainly patient administration and hospital management	e.g. Exchange with payers (billing / claims) and supply chain

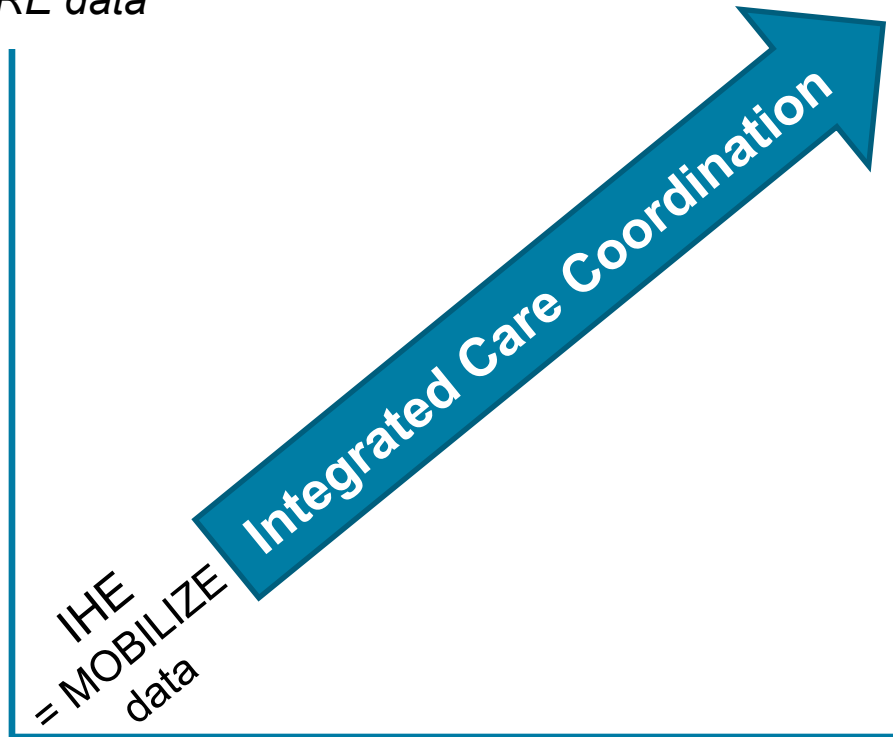

FROM SILOS TO CARE CHAIN

... toward truly integrated care coordination & delivery

EMR ADOPTION - ECONOMIC AND CLINICAL PERFORMANCE

IS EXPENSE BY EMRAM STAGE

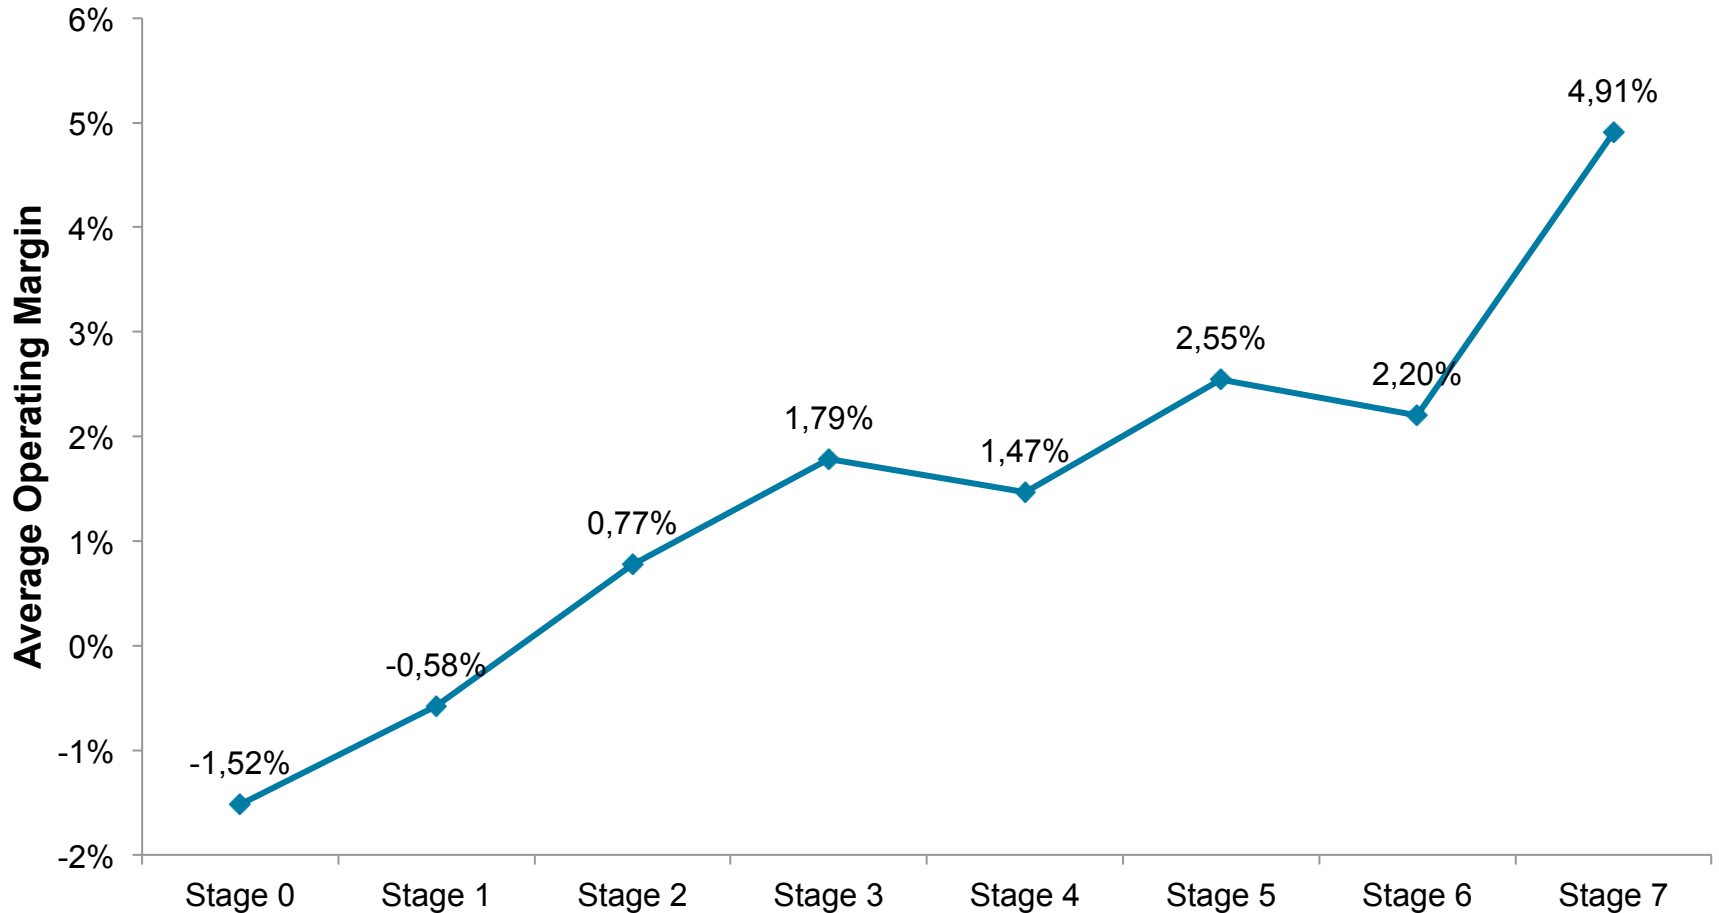

EMR Adoption has a cost

Based on data from HIMSS Analytics™ Database (U.S.A.)

OPERATING MARGIN BY EMRAM STAGE

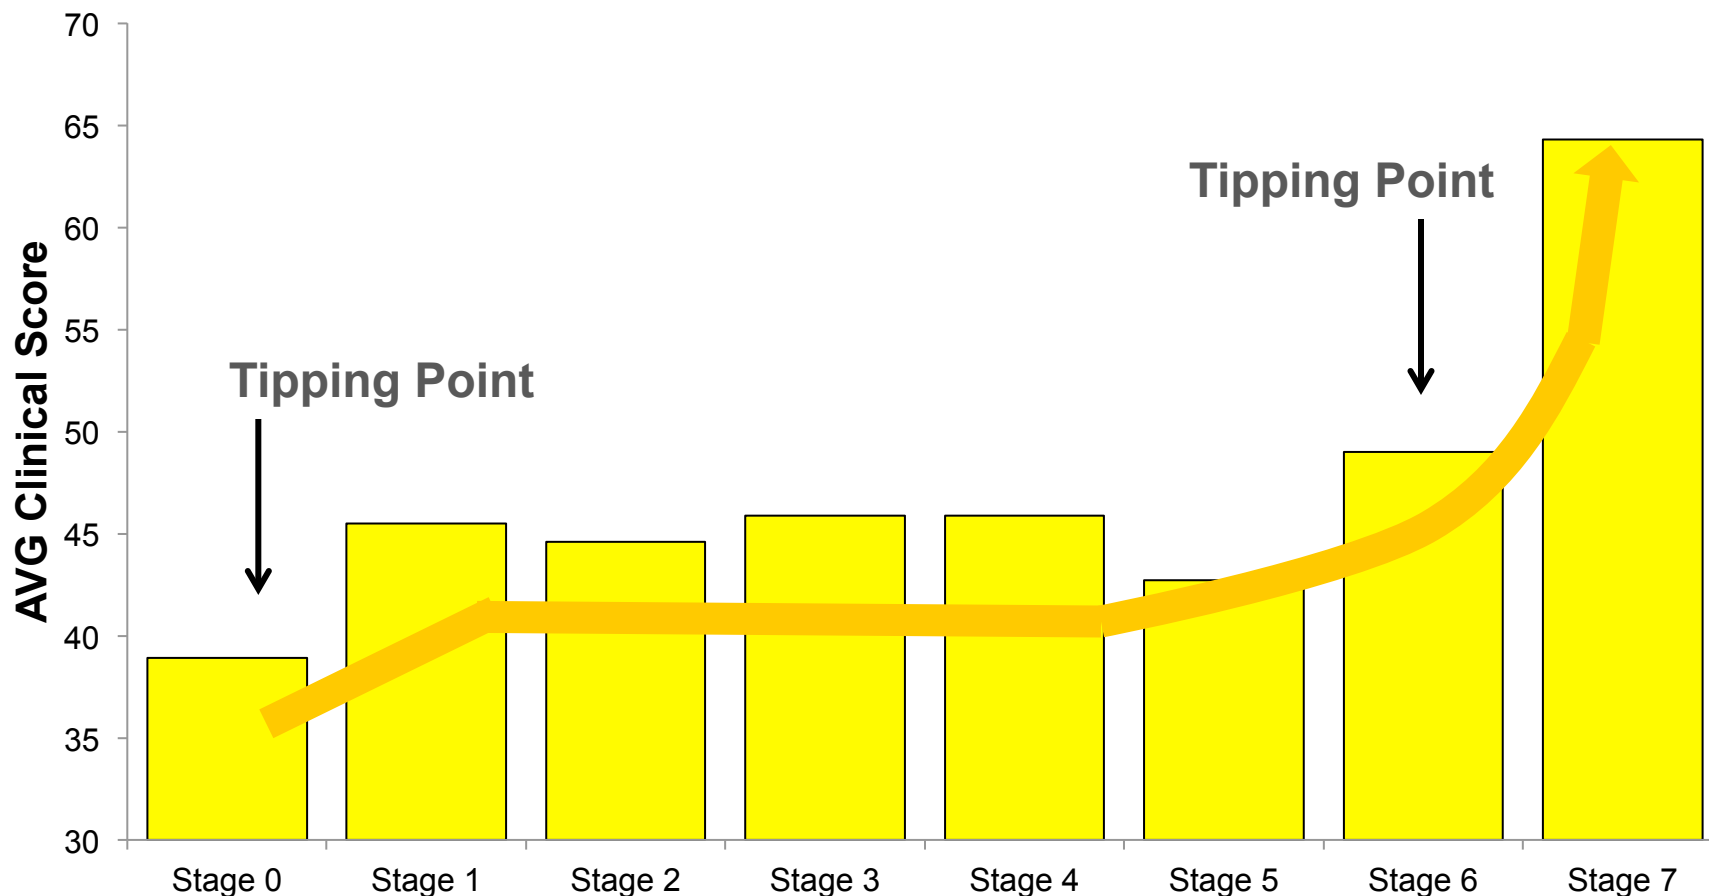

EMR Adoption also has a ROI

Based on 2011 data from HIMSS Analytics™ Database (U.S.A.)

CLINICAL PERFORMANCE BY EMRAM STAGE

... clear positive association with advanced EMR capabilities

Based on data from HIMSS Analytics™ Database (U.S.A.)

ECONOMIC IMPACT OF EMR ADOPTION

... What are the main ROI points?

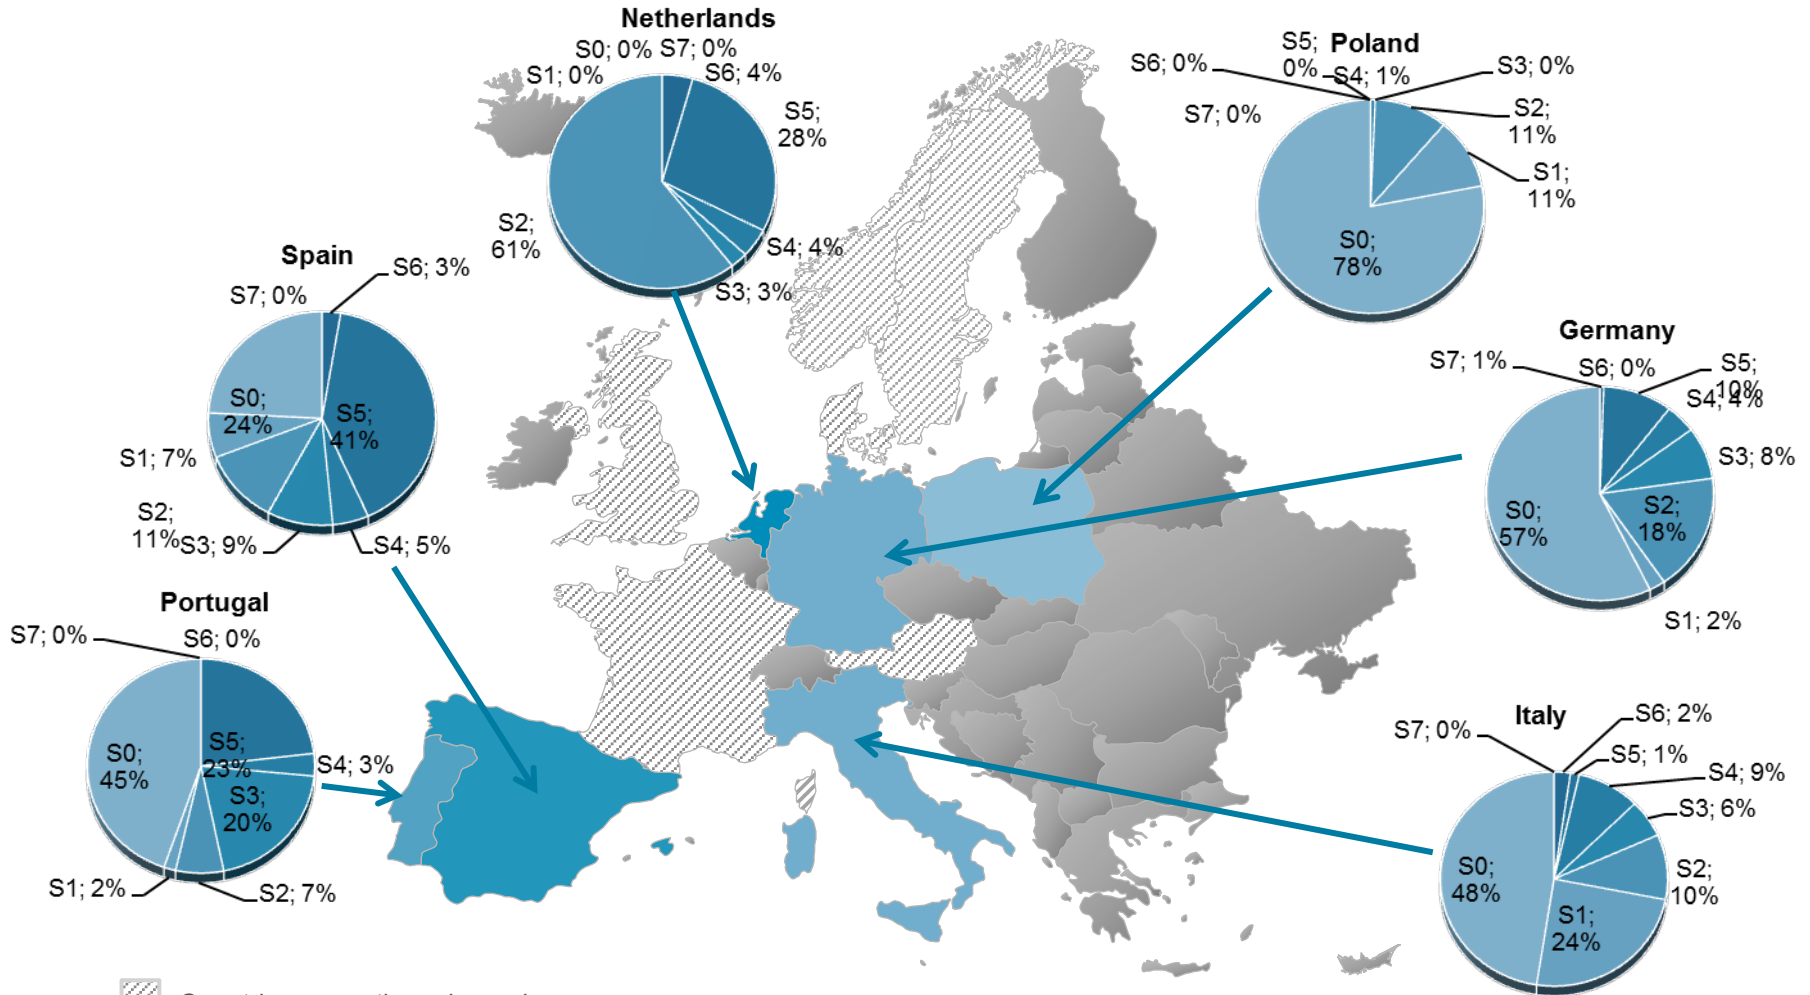

- Avoid duplicate medical orders
- Reduce length of stay
- Reduce medical errors leading to complications, repeat admissions, etc.
- Reduce Adverse Drug Events (ADEs)
- Workflow / process improvements, e.g.:
 - Coding & Billing
 - Transcription
 - Scanning
 - Storage

→ Stage 6 is where ROI pay-off really begins

PRIMARY CARE EMRAM

MEASURING HIE – THE PC-EMRAM

... an adoption model for primary care EMRs and HIE with acute care

- To measure IT Adoption in the primary care setting
 - for patient and prescriber based encounters, i.e. physician and/or licensed care giver assessing and generating orders & prescriptions
 - for tethered and non tethered practices alike
 - in North America, Europe, Middle East, Asia, because Northern Europe and Southern Asia are way ahead of the US with A-EMR deployments
- To assess “care chain readiness”
 - for Health Information Exchange
 - for community medical records / EHRs
 - for Clinical and Business Intelligence across “silos”
- To “Push the market”

THE PC-EMRAM

... an adoption model for primary care EMRs and HIE with acute care

Stage	Cumulative Capabilities
Stage 7	HIE, data sharing with community based HER, robust business and clinical intelligence
Stage 6	Advanced CDS, proactive care management, population health management
Stage 5	Patient engagement
Stage 4	CPOE, physician documentation with CDS, external data exchange
Stage 3	E-prescribing, nursing documentation, medication reconciliation, CDS
Stage 2	CDR, access to results from outside facilities
Stage 1	Access to clinical information, unstructured data, multiple data sources
Stage 0	Paper based chart

Note: "Ambulatory EMRAM" will be used in the United States
