Base Bibliotek

The screenshot shows the official website of the National Library of Norway (NB.no). The header features the NB.no logo and the text "Søk i Nasjonalbiblioteket". Below the header, there is a navigation bar with links for "Home", "Om Nasjonalbibliotek", "Fag", "Opplevelse", "Kontakt", and "English".

LIBRARY SERVICES FROM THE NATIONAL LIBRARY OF NORWAY

Directory of Norwegian Libraries and their ILL Associates Abroad (BIBLIOTEK)

[On BIBLIOTEK]

[Directories of Nordic libraries]

[How to use the search form]

[Order Archive]

[ILL guidelines]

[Other databases]

[Norwegian versior]

You may search for words containing diacritical marks and accents by using the basic letter.

E.g.: Use **a** for searches on **a, á, à, á, á**, and **å**. use **c** for **ç**, **n** for **ñ** and **ñ**, and **ss** for German **ß**.

You may also click on the letters **ð, þ, æ, ø** and **å** to have them pasted into the search fields.

Masking and **Boolean** operators may be used. Use **?** and **#** for left-, middle and right **truncation**.

Word search:

Name of library:

Place name:

Countries:

- Denmark
- Finland
- Faroe Islands

Library type:

- Libraries in Archives
- Colleges
- County libraries

AND / OR between the fields

Base Bibliotek

Name:	Bibliotek
Title:	Directory of Norwegian libraries and their ILL associates abroad ("Bibliotek")
Type:	Directory
Subjects:	All Norwegian public, research and special libraries, university, polytechnic and folk high school libraries, some libraries of elementary and secondary schools. Also libraries that participate in the Nordic union catalogue of serials (NOSP) and other foreign libraries lending in Norway or using the National Library services
Extension:	For Norwegian libraries: Name of institution (including former name), postal address, street address, telephone number, fax number, e-mail address, web-address (URL), library code (including former code), opening hours, subject fields, special collections, special bibliographies and documentation services. Information on libraries outside Norway is less extensive
Special search facilities:	Library code, name of institution (also foreign name form), address, telephone number, e-mail address, web site, subject field (in Norwegian only), library system, subject field, county and municipality name
Updating:	Daily
No of records Jan 1st:	4.955
Printed products:	Basis of "Norsk samkatalog : adresseliste for samarbeidende bibliotek ..." ["Norwegian union catalogue : a directory to participating libraries ..."] and "NOSP 19XX : adresseliste til nordiske bibliotek = Directory to Nordic libraries"
CD-ROM:	Library addresses for ordering are included in "Nordisk samkatalog for periodika (CDNOSP) = Nordic union catalogue of serials" (last edition: 2000, no. 1) and "Norsk samkatalog for bøker 1983- (CDSAM) = Norwegian union catalogue of books 1983-" (last edition: 2000, nr 2)
Database system:	TRIP
Availability:	Open to the general public
Web address:	http://www.nb.no/baser/bibliotek/english.html

(Selection of elements from XML-document)

Base Bibliotek -> Linked data

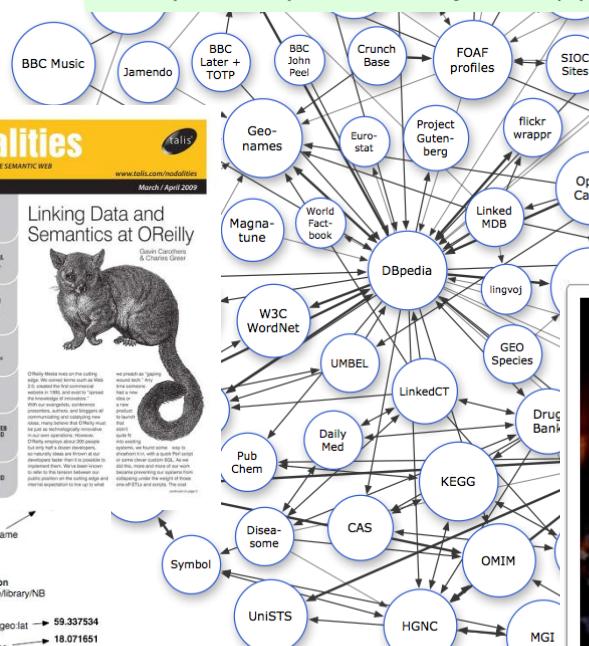

Linked Data

The Semantic Web isn't just about putting data on the web. It is about making links, so that when you have some of it, you can find other, related, data.

Like the web of hypertext, the web of data is constructed with documents on the web. However, relationships anchors in hypertext documents written in HTML, for data they links between object or concept. But for HTML or RDF, the same expectations apply to make the web grow.

1. Use URIs as names for things
2. Use HTTP URIs so that people can look up those names.
3. When someone looks up a URI, provide useful information, using the standards (RDF, SPARQL)
4. Include links to other URIs, so that they can discover more things.

Simple. In fact, though, a surprising amount of data isn't linked in 2006, because of problems with these problems, details of implementation, and factors affecting choices about how you publish.

RDF Primer

W3C Recommendation 10 February 2004

This version:

<http://www.w3.org/TR/2004/REC-rdf-primer-20040210/>

Latest version:

<http://www.w3.org/TR/rdf-primer/>

Previous version:

<http://www.w3.org/TR/2003/PR-rdf-primer-20031215/>

Editors:

Frank Manola, fmanola@acm.org
Eric Miller, W3C, em@w3.org

Series Editor:

Brian McBride, Hewlett-Packard Laboratories, bwm@hplb.hpl.hp.com

Please refer to the [errata](#) for this document, which may include some normative corrections.

See also [translations](#).

Modelling

1. **Data analysis and preparation**
 - traditional usage, functional requirements, datatypes etc.
 - identifying potential URIs
 - identified existing vocabularies
 - (identified potential external links/URIs)
2. **RDFization**
3. **Ontology development**
4. **XSLT stylesheet/transformation**
5. **Triple store**
6. **SPARQL testing**
7. **Remodeling**

Analysis and preparation

Selection of data for experimental dataset

identifiers, 2 x names, 2 x addresses, geodata, e-mails, homepage, type of ils, type of library, z39.50-targets, (n)ill specifications etc.

Geo-data in UTM format transformed to lat/long

<gabx>270592</gabx> → <geo:lat>10.401926051</geo:lat>
<gaby>7040568</gaby> → <geo:long>63.419495379</geo:long>

URIs

**URIs assigned to «things» in the dataset;
libraries, library types, integrated
library systems, postal codes, country
codes**

- **HTTP URIs**
- **Hierarchical structure**
- **Derived from existing non-URI
identifiers**
- **Simple naming pattern**

Based on:

Linked Data Patterns

A pattern catalogue
for modelling,
publishing, and
consuming Linked
Data

Leigh Dodds Ian Davis

<http://patterns.dataincubator.org/book/>

URIs

Example:

```
<http://bb.biblab.no/lib/1160101> a foaf:Organization ;  
#Derived from <bibnr>1160101</bibnr>
```

```
bb:ils <http://bb.biblab.no/ils/BIBSYS> ;
```

```
v:adr [ a v:home ;  
        v:Street "Høgskoleringen 1, Gløshaugen" ;  
        v:postal-code <http://bb.biblab.no/postal-code/7034> ] .
```

Challenge:

Algorithmic derivation → «Garbage in, garbage out»

RDFization

```
v:adr [ a v:home ;  
        v:Street "Høgskoleringen I, Gløshaugen" ;  
        v:postal-code <http://bb.biblab.no/postal-code/7034> ] .
```

```
<http://bb.biblab.no/postal-code/7034> v:postal-code "7034" ;  
V:Locality "Trondheim" .
```

Normalization of RDF? 3NF?

SPARQL

Norwegian names and visitation addresses to libraries in Oslo using the integrated library system «Bibliofil»

Virtuoso SPARQL query form:

Query text

```
prefix foaf: <http://xmlns.com/foaf/0.1/#>
prefix bb: <http://basebibliotek.no/bb/1.0/#>
prefix v: <http://www.w3.org/2006/vcard/ns#>

SELECT ?name ?street ?PCODE ?place WHERE
{?bibliotek a foaf:Organization ;
foaf:name ?name ;
v:adr ?address ;
bb:ils <http://bb.biblab.no/ils/BiblioFil> .
FILTER ( lang(?name) = "no" )
?address a v:home ;
```

Display Results As: Rigorous check of the query

```
prefix foaf: <http://xmlns.com/foaf/0.1/#>
prefix bb: <http://basebibliotek.no/bb/1.0/#>
prefix v: <http://www.w3.org/2006/vcard/ns#>
```

```
SELECT ?name ?street ?PCODE ?place WHERE
{?bibliotek a foaf:Organization ;
foaf:name ?name ;
v:adr ?address ;
bb:ils <http://bb.biblab.no/ils/BiblioFil> .
FILTER ( lang(?name) = "no" )
?address a v:home ;
v:Street ?street ;
v:postal-code ?PCODE .
?PCODE v:postal-code ?PCODE ;
v:Locality ?place .
FILTER regex( ?place, "oslo", "i" ) }
ORDER BY ?name
```

By David Massey: <http://bibin.hio.no/~davm/bb/bb2.html>

External links and «Open data» vs. «Linked data»

To do:

```
<http://bb.biblab.no/libtype/UNB> a bb:Libtype ;  
    skos:prefLabel "UNB" ;  
    skos:altLabel "Universitetsbibliotek" ;  
    owl:sameAs <http://dbpedia.org/page/Category:Academic_libraries> .
```

```
<http://bb.biblab.no/lib/1160101> a foaf:Organization ;  
    foaf:based_near <http://sws.geonames.org/3133880/> ;  
    bb:mother_inst <http://dbpedia.org/page/Norwegian_university_of_science_and_technology> .  
    v:adr [ a home ;  
        v:Street "Høgskoleringen 1, Gløshaugen" ;  
        v:postal-code <http://posten.no/postnummer/7034> .
```

The four rules/expectations of behavior

1. Use URIs as names for things
- To do! 2. Use HTTP URIs so that people can look up those names
- To do! 3. When someone looks up a URI, provide useful information, using the standards (RDF, SPARQL)
- To do! 4. Include links to other URIs, so that they can discover more things

Thank you!

kim.talleras@jbi.hio.no
