CHALMERS

About Chalmers

- Founded in 1829
- Technological university
- 11,000 students, 200 research groups, 17 departments
- OA mandate since 2010

CHALMERS

Chalmers Publications Library (CPL)

- Started in 2004, by Chalmers Library
- ≈ 36,000 publications
- ≈ 2,000 OA publications (from 2010-)
- Collaboration with Gothenburg University
- Participates in SwePub & OpenAIRE
- Scigloo, open source software

Photochromic Supramolecular Memory With Nondestructive Readout

Author and affiliation:
Joakim Kärnbratt (Department of Chemical and Biological Engineering, Physical Chemistry); Martin Hammarson (Department of Chemical and Biological Engineering, Physical Chemistry); Shiming Li (Department of Chemical and Biological Engineering, Physical Chemistry); Harry Andersson (-); Bo Albinsson (Department of Chemical and Biological Engineering, Physical Chemistry); Joakim Andréasson (Department of Chemical and Biological Engineering, Physical Chemistry)

Published in:
Angewandte Chemie - International Edition, 49 (10) p. 1854-1857

ISBN/ISSN:
1433-7851

Publication type:
Scientific journal article - peer reviewed

Year of publication:
2010

Language:
English

Link to fulltext:
http://dx.doi.org/10.1002/anie.200906088

URL to fulltext (local repository):
http://publications.lib.chalmers.se/records/fulltext/local_115555.pdf

Abstract:
Looking without touching: The light-controlled isomerization of a complex containing a pyridine-appended dithienylethene (DTE; green) and a porphyrin dimer induces dramatic structural and spectral changes (see picture). These changes are monitored in a region outside the photochromically active absorption bands of DTE, therefore allowing a nondestructive readout so that the process functions as a molecular optically controlled memory.

Subject (based on subjects set by Swedish Agency for Higher Education):
NATURAL SCIENCES ->
Chemical Sciences ->
Physical Chemistry
NATURAL SCIENCES ->
Chemical Sciences ->
Physical Chemistry ->
Spectroscopy

Keywords:
molecular devices, optical readout, photochromism, porphyrinoids, supramolecular chemistry

Project:
Photochromic systems for solid state molecular electronic devices and light-activated cancer drugs (PHOTOCHROMES) (EC/FP7/203952) More information
