F1000Posters THE OPEN REPOSITORY FOR POSTERS AND SLIDES

The CMB is setting up a Open Access Poster Portal for the UMCG.
The intension is to deposit:

- scientific posters and presentations slides of conferences held in the UMCG
- presentation slides or posters by UMCG staff at other Conferences
- scientific posters that are exposed in the hallways of the UMCG already

Here is what we have achieved so far:

University Medical Center Groningen (UMCG)

Healthy Ageing - Why and How?

Contact

Healthy ageing is a lifelong process that starts even before conception, with parents who pass on their genes and with them the risks and opportunities for a healthy life course, or the occurrence of illness later in life. Lifestyle, food patterns and environmental factors influence the development of health. However, new knowledge is required about the influence of these factors, and how they interact with one another.

Research into ageing calls for a multidisciplinary approach. In Groningen Healthy Ageing is seen as a a joint research challenge for the UMCG and several faculties of the University of Groningen.

The multidisciplinary research extends from fundamental biological and (pre)clinical research through to applied research into social-societal effects of disease and health. In this way results can be translated rapidly into adequate and/or improved

Position International Rankings

English | Nederlands

> Corporate Movie

Within the framework of the internationalization of higher education, competition to attract top foreign students and personnel is increasing between universities. A strong international profile is essential in order to be in with a chance. This is why there is great interest in international ranking lists. For more information on the Dutch position in international rankings, please refer to the website of the VSNU (Association of Universities in the Netherlands).

QS World University Rankings

The annual *QS World University Rankings* is an influential ranking list of higher education institutions. The University of Groningen features at number 109 in a list of more than 700 universities. According to the QS Subject Rankings, the University of Groningen belongs to the global top-100 in the areas of Linguistics (68), History (76) and Sociology (68).

> QS World University Rankings 2012-2013

Academic Ranking of World Universities

The Academic Ranking of World Universities is a global top-500, published annually by the Shanghai Jiao Tong University. The University of Groningen can be found in a joint 101nd-150th place globally. A closer analysis of the item scores reveals that the University is actually in 103rd place. For Chemistry the University of Groningen belongs to the top-100: place 51-75.

> ARWU

THE World University Rankings

The Britisch magazine Times Higher Education has been publishing the QS Ranking above since 2005. But they have changed their methodes and researcher radically to Thomson Reuters, mostly known for his citation database 'Web of Knowledge'. In the first edition (2010) there were some big errors in the results, but most of them have been repaired in THE-WUR 2011. The University of Groningen now takes the 134th place in the top-500.

THE-WUR Rankings 2011

Leiden Ranking

In 2010, the Leiden Centre for Science and Technology Studies published an updated version of the 'The Leiden Ranking'. This ranking includes both a European and World

Genetic association, pathway analyses, genomics, autoimmune disorders, diabetes, intestinal inflammatory diseases

My inspiration

I am fascinated by DNA and the wealth of information that is hidden in our genetic material. I want to learn why a genetic predisposition leads to disease in some individuals but not in others. If we gain insight into this process we may be able to finds leads for developing instruments to treat patients and to prevent disease.

I also enjoy working with students and young scientists, and encouraging them to grow into skilful and competent researchers. See comments from my mentor group.

My work

Creative, but not effective enough

iPad 12:11 100%

My work

My research is aimed at unraveling the causal genetic factors of some hereditary diseases. How does variation in hereditary material lead to disease and how can we use such knowledge to prevent or treat diseases? My PhD research focused on a relatively simple genetic disorder that is inherited according to Mendelian laws. On my return to the Netherlands at the end of 1995, I was one of the first to take up the challenge to search for genetic factors determining more complex disorders. My group adopted a hypothesis-generating, genome-wide approach and was able to make great progress on the genetic factors for intracranial aneurysms, type 2 diabetes and celiac disease.

I am a member of the the Celiac Disease Consortium (CDC) and am active in two EU projects the COPACTIC study (on COPD); and PreventCD (on celiac disease).

See more about my current work in Groningen: Genetics of complex immune-related diseases

Ten most important papers (per March 2012)

302 PubMed-listed publications since 1990, which have been cited >9,833 times. My ISI *h*-index is 51 (GoogleScholar *h*-index 59).

The average number of citations per paper is 34.3 (source: ISI).
