DICTIONARY OF SCIENTIFIC SCORPION NAMES

G rard DUPRE

26 rue Villebois Mareuil, 94190 Villeneuve St Georges, FRANCE Email: gd.hadrurus@orange.fr

Summary

Many scientific scorpion names describe a scorpion's habits, color, distribution or morphological characters, while others are named after their discoverers (collectors) or in honour of prominent scorpologists and other persons. This work of reference lists the generic, subgeneric, specific and subspecific names from the extant and fossil scorpions in the world (with synonyms) and provides their meanings.

HOW TO USE THIS DICTIONARY

Standard specific (initial lower-case letter) and generic (initial upper-case letter) entries are illustrated in the examples below, showing current names with derivations:

albimanus L. *albus*, white; - *manus*, hand. (*Lychas*)

Anomalobuthus Gr. *an malos*, strange; - genus *Buthus*

All are based on classical words (the abbreviations Gr.= Greek, and L.= Latin, are the most commonly used). We do not differentiate Latin, late Latin and modern Latin.

For "inverted commas", uncertain determination for this taxon: *americus* America ("Scorpio"). Buthidae Incertae Sedis

Incorrect spellings and incorrect subsequent spellings are not considered.

Standard abbreviations and symbols:

subsp.: subspecies. subg.: subgenus. Myth.: mythology. US: United States of America.

- more taxa with exactly the same etymology:

africanus L. *Africanus*, African. (*Opisthacanthus*) • (*Pandinus*) (syn. *Pandinus imperator*) • (*Androctonus australis* subsp.) (syn. *Androctonus australis*)

- etymologies derived from a common root:

vachoni Max Vachon, French arachnologist. (*Bothriurus*, *Compsobuthus*, *Euscorpions*, *Heteronebo*, *Orthochiroides*, *Smeringurus*, *Troglotayosicus*) ► *Vachonia* ► *Vachoniochactas* with genus *Chactas* ► *Vachoniolus* ► *Vachonus*

AUTOCHTHONYMS: NAMES BASED ON VERNACULAR OR NATIVE NAMES

Autochthonym (Gr. *autokhthōn* indigenous, native; *onuma* name)

Alacran Spanish name for scorpion

iskay Quacha word for ‘two’, second species of *Orobothriurus* from Peru

EPONYMS: NAMES COMMEMORATING PERSONS

Eponyms (Gr. *epōnumos* named offer)

kraepelini For Karl Kraepelin, German arachnologist (*Heteroscorpion*, *Parabuthus*, *Scorpiops*)

Kochius For Carl Ludwig Koch, German arachnologist

obsti For E. Obst, collector (*Lychas*)

TOPONYMS: NAMES BASED ON GEOGRAPHICAL PLACE NAMES

Toponyms (Gr. *topos* place; *onuma* name)

It's necessary to determine derivatives cases (*guanambiensis* for example) with cases of attachment (*ankarana* for example), the latter are not latinized. The Latin suffix, -*ensis* and -*icus* meaning belonging to, usually a place.

ankarana Ankarana Massif, Madagascar (*Grosphus*)

guanambiensis Guanambi, State of Bahia, Brazil (*Rhopalurus*)

BIONYMS: NAMES BASED ON TYPE OF HABITAT AND ENVIRONMENTAL CONDITION

Bionyms (Gr. *bios* life; *onuma* name)

troglodytes Gr. *trōglodutēs*, cave-dweller (*Hadogenes*)

intertidalis Intertidal zone (*Grosphus*)

MORPHONYMS: COLOURS, PHYSICAL CHARACTERISTICS

Morphonyms (Gr. *morphē* form; *onuma* name)

flavescens L. *flavescens*, golden-yellow (*Microtityus*, *Opisthophthalmus*, *Orthochirus*)

gigas L. *gigas*, giant (*Babycurus*, *Opisthophthalmus*)

TAXONYMS: VARIETY OF NAMES ALL SUGGESTIVE OF RELATIONSHIP OR RESEMBLANCE

Taxonyms (Gr. *taxis* arrangement; *onuma* name)

Cicileiurus Combination of the generic names *Cicileus* and *Leiurus* referred to close relationship existing among these genera

Hadruroides genus *Hadrurus*; - Gr. *oides*, resembling

aalbui Rolf L. Aalbu, US entomologist. (*Syntropis*)
aareyensis Aarey Milk Colony, Maharashtra, India. (*Lychas*)
aba Afro-brazilian word for “hope of peace”. (*Tityus*)
abdullahbayrami Abdullah Bayram, Turkish biologist. (*Leiurus*)
aberlenci Henri-Pierre Aberlenc, French entomologist. (*Lychas*)
abruptus (*Urodacus*) L. *abruptus*, cut (conspicuous incision in the middle of anterior margin). (syn. *Urodacus manicatus*)
abudi Abraham J Abud Antún, Dominican arachnologist. (*Rhopalurus*, *Tityus*)
abyssinicus Abyssinia (Ethiopia) is still used since it covers both Eritrea and Ethiopia. (*Compsobuthus*, *Parabuthus*). • (*Uroplectoides*) (syn. *Uroplectes fischeri*)
acananensis Acanaña, State of Amazonas, Venezuela. (*Tityus*)
acanthocercus Gr. *akantha*, spine, thorn; - *kerkos*, tail. (*Hemiscorpius*)
Acanthochirus Gr. *akantha*, spine, thorn; - *kheiros*, hand. (syn. *Cercophonius*)
†*Acanthoscorpio* Gr. *akantha*, spine, thorn; - *skorpió*, scorpion
Acanthothraustes Gr. *akantha*, spine, thorn; - genus *Teuthraustes*. (syn. *Euscorpius* and subgenus *Tetratrachobothriurus*)
acanthurus Gr. *akantha*, spine, thorn; - *oura* tail. (*Reddyanus*)
acapulco Acapulco, Guerrero, Mexico. (*Konetontli*)
achalensis Pampa of Achala, Argentina. (*Urophonius*)
aconcagua Aconcagua Mountain situated very close to the type locality. (*Brachistosternus*)
acromelas Gr. *akros*, tip; - *melas*, black. (*Rhopalurus*)
actites Gr. *aktites*, coast-dweller. (*Paruroctonus borregoensis* subsp.)
actun Cave in Maya language. (*Diplocentrus*)
aculeatus [*Androctonus* (*Leiurus*) *quinquestriatus* subsp.] L. *aculeatus*, furnished with thorns. (Syn. *Leiurus quinquestriatus*)
acuteccarinatus L. *acutus*, sharp-pointed; - *carinata*/*carinatus*, keeled, ridged (*carina* keel); -*atus*, suffix meaning provided with. (*Compsobuthus*)
acutidens (*Tityus*) L. *acutus* sharp-pointed; - *dens*, tooth. (syn. *Tityus serrulatus*)
adcocki Richard Adcock, US sponsor of research. (*Serradigitus*)
adisi Joachim Adis, German entomologist. (*Tityus*)
adornellae In honor of Mrs Adornella Politi. (*Chactas*)
adrianae Adriana, wife of José Manuel Ayala, scorpions’ amateur. (*Teuthraustes*) ► Adriana Ratto Politi, sponsor of research (*Buthus*, *Hadruroides*, †*Sucinlourencous*)
adrianoi Adriano Monteiro de Castro Pimenta, Brazilian toxinologist. (*Tityus*)
adustus L. *adustus*, burnt (coloured). (*Opisthophthalmus*)
aegaeus (*Euscorpius carpathicus* subsp.) Aegean Sea. (syn. *Euscorpius carpathicus*)
aequinoctialis L. *aequinoctialis*, equinoctial. (*Chactas*)
aeneas Gr. Myth. Aeneas, Trojan hero. (*Androctonus*)
aequispinus (*Opisthacanthus*) L. *aequo*, equal, like; - *spinus*, thorn. (syn. *Opisthacanthus diremptus*)
aeratus (*Buthus conspersus* subsp.) L. *aeratus*, covered with copper or bronze (coloured). (syn. *Hottentotta conspersus*)
aethiops (*Tityus*) Gr. *aithiops*, blackened. (syn. *Isometrus maculatus*)
afar Afar, people of Ethiopia, Djibouti and Eritrea (*Orthochirus*)
afer (*Scorpio*) L. *Afer*, African. (syn. *Heterometrus cyaneus* and *Heterometrus indus*)
affinis (*Scorpiops*) L. *affinis*, related, allied. (syn. *Scorpiops hardwickii*)
Afghanobuthus Afghanistan; - genus *Buthus*
Afghanorthochirus Afghanistan; - genus *Orthochirus*. (syn. *Orthochirus*)
afghanus Afghanistan. (*Androctonus*, *Compsobuthus*, *Mesobuthus eupeus* subsp., *Orthochirus*, *Scorpiops*) • (*Buthus*) (syn. *Mesobuthus eupeus*)
africanus L. *Africanus*, African (*Opisthacanthus*) • (*Pandinus*) (syn. *Pandinus imperator*) • (*Androctonus australis* subsp.) (syn. *Androctonus australis*) • (*Scorpio africanus subtypicus*) (syn. *Pandinurus magretti*)
Afroisometrus L. *Afer*, African; - genus *Isometrus*

agamemnon Gr. Myth. : Agamemnon, son of Atreus. (*Rhopalurus*)

agarwali Ishan Agarwal, Indian zoologist. (*Buthacus*)

agilis L. *agilis* nimble, active. (*Chaerilus*, *Gertschius*)

agnetis¹ Etymology undiscovered. Possibly Agnet, medieval character wich means lamb, sweet. Or feminine name ?(*Mesobuthus*).

aguajensis (*Bioculus*) Arroyo Aguaje, Cerralvo Island, Baja California Sur, Mexico. (syn. *Bioculus cerralvensis*)

aguayoi (*Centruroides thorelli* ssp.). In honor of Carlos C. Aguayo. (syn. *Centruroides guanensis*)

aguilari Pedro G. Aguilar, Peruvian arachnologist. (*Hadruioides*)

ahincoi AHINCO, "Grupo ecologista de la población de Ejido", State of Mérida, Venezuela. (*Tityus*)

†**airdriensis** Airdrie, Scotland, UK. (*Waterstonia*)

ajax (*Androctonus*) Gr. Myth. Ajax, Trojan hero. (syn. *Buthus occitanus*)

akananensis Akanaña, Amazonas, Venezuela. (*Teuthraustes*)

Discussion.

About 2,900 names have been granted since 1758. We have made some comparisons, the results of which are :

Three major categories of denominations represented about 65 % of the allocations, and these were equal (22 % on average). It is :

- dedications to scientists (22.7%) whose majority is of course the arachnologists. There are also various scientists : zoologists, entomologists (many), toxinologists, biologists, physicians, naturalists, ecologists etc. Without surprise, palaeontologists are concerned with fossil taxa. Note that Max Vachon is the one who has been assigned the greatest number of taxa (11 taxa).
- Namings after a wide variety of place names (25.2%): continent, country, region, city, river, etc. Type-communities are often the source of these awards and by extension to broader geographic coverage.
- Namings after morphonyms (16.7%) . They are very varied and characterize either only one single body part (hand, leg, tail, etc.) or the entire body, because of its size, for example.

Other allocations (35 %) are, in decreasing order :

- the colour (5.1 %), whether it is general or partial (only one part of the body);
- the dedication to collectors (8.3 %), whose occupation or nationality are little or not specified at all;
- the taxonomy (5.4 %) which shows a relationship from taxon to taxon;
- the dedication (3.9 %) to various other persons : family, friends, colleagues or just under the term "in honor of" without any further information.
- the bionymy (2.2%), which specifies the taxon's biotope : sand, swamps, cave, stone, etc.

To end this roundup, we find at very low degrees various categories like mythological surnames (very fashionable in the nineteenth century), so-called "ethnological" dedications (current or extinct ethnic groups), common names (translation of the word "scorpion" in various languages), names related to geology as far as fossil species are concerned (geological periods, fossil matters such as "amber" or "copal") and finally names concerning more or less the behavior of the taxon (nature, dangerousness etc).

Conclusion.

The naming of scorpions taxa is not different from what we find in other zoological groups : morphology, eponyms and place names are the three main sources of inspiration for the zoologists.
