

6th International Workshop on NEWS RECOMMENDATION AND ANALYTICS

in conjunction with 27th ACM International Conference on Information and Knowledge Management (CIKM 2018)

23-26 October 2018, Turin, ITALY

Important Dates

Paper submission: **1 August 2018**

Authors notification: **17 Aug. 2018**

Camera-ready due: **27 Aug. 2018**

Submission

Submissions should be formatted according to the ACM 2-column format. We accept long papers (8 pages), short papers (4 pages) and demo papers (2-4 pages).

Accepted papers will be published by CIKM as a joint workshop proceedings in CEUR workshop series.

Keynote Speakers

Frank Hopfgartner, *University of Sheffield, UK*

Anja Benner-Tischler, *University of Kassel, Germany*

A representative of the Plista GmbH, *Germany*

Workshop Chairs

Özlem Özgöbek

ozlem.ozgobek@ntnu.no

Norwegian University of Science and Technology (NTNU), Norway

Benjamin Kille

benjamin.kille@dai-labor.de

*Berlin Institute of Technology
Berlin, Germany*

Jon Atle Gulla

Norwegian University of Science and Technology (NTNU), Norway

Martha Larson

*Radboud University Nijmegen,
The Netherlands*

Call For Papers

The news domain is characterized by a constant flow of unstructured, fragmentary, and possibly unreliable news stories from numerous sources and different perspectives. Quickly finding relevant information challenges readers, who rely on tools to filter the stream of news. The spread of increasing concerns about disinformation coupled with privacy concerns necessitate improving these tools. This workshop addresses primarily news recommender systems and news analytics. As part of news recommendation and analytics, Big Data architectures and large-scale statistical and linguistic techniques are used to extract aggregated knowledge from large news streams and prepare for personalized access to news.

In this workshop we aim to bring researchers, media companies, and practitioners together, in order to exchange ideas about how to create and maintain a trusted and sustainable environment for digital news production and consumption.

Topics of interests for this workshop include but are not limited to:

- News Recommendation
 - News context modeling
 - Deep learning
 - Big data technologies for news streams
 - Practical applications
 - News diversity and filter bubbles
- News Analytics
 - News semantics and ontologies
 - News from social media
 - Large-scale news mining and analytics
- Fake News and Disinformation
 - Detection and analysis of disinformation
 - Spread mechanisms of news disinformation
- User Experience Issues
 - Privacy and security in news recommender systems
 - User profiling
- Evaluation Platforms, Methods and Datasets
 - Experiences with evaluation platforms
 - News datasets
 - Evaluation methods

This year, we also provide the opportunity for the researchers who would like to test their ideas on real world news settings by using our **datasets and evaluation platforms**. For more information, please visit our web page.
