

Courses

Courses

This section gathers all the pages relevant for a specific course, especially during the first 3 years, where it serves as an addition to your normal blog / webpage / It's Learning space. On each of the pages, you can find an explanation of what should be your goals in learning software during the course, which concepts you should be familiar with and how to go about learning it. Due to the interlinked nature of the Wiki, it is easy to wander off and discover new things, both within the Wiki as well as on external sites. You can also have a look at the next semesters focus and refresh you knowledge from previous courses' curriculum.

Feedback

Feedback on your course should be given to your course coordinator, while errors, omissions or other things directly in the Wiki can be sent by email to [Pasi Aalto](#)
